THE
APOSTOLIC BIBLE
POLYGLOT

GREEK-ENGLISH INTERLINEAR
A numerically coded Greek-English Interlinear Bible,
English-Greek Index, and Lexical Concordance.
INTRODUCTION

APOSTOLIC BIBLE DESCRIPTION

The Apostolic Bible Polyglot consists of three major works – The Apostolic Bible literal interlinear translation of the Greek Old and New Testaments, The Lexical Concordance of The Apostolic Bible, and The English-Greek Index of The Apostolic Bible. *See Note on the Second Edition. These three works are numerically coded with the AB-Strong numbering system.

THE GREEK SCRIPTURES

The Greek Old Testament, commonly referred to as the Septuagint or LXX, was translated from the Hebrew Scriptures approximately 250 years before the Christ. An account of this occurrence is noted in the dubious Letter of Aristeas, and can be found in the back of An Introduction to The Old Testament in Greek, by Henry Barclay Swete, 1902. Whether or not this letter is true to the facts can be debated, but that the Greek Scriptures were well entrenched by the time of the birth of the Christ is undeniable.

The acceptance of the Greek Scriptures can best be described by a quotation in the Mishna written around the time of the Christ, with Herbert Danby’s translation reading in Megillah 1.8, ”The Books [of Scripture] differ from phylacteries and Mezuzahs only in that the Books may be written in any language, while phylacteries and Mezuzahs may be written in the Assyrian writing only. Rabban Simeon b. Gamaliel says: ‘The Books, too, they have only permitted to be written in Greek.’”

At the time the New Testament was being written, the language of the common people of the Holy Land was Aramaic, but Greek was the international language used throughout the Mediterranean world. The sign above the head of the suffering Christ was written in Hebrew, Greek and Latin, with Latin being the tongue used by the Roman military, prelates, and judiciary. The Hellenists in Jerusalem at the time of the Passion were Greek speaking Jews, and some became Christians as related in Acts 11:20. Also in Acts 21:37 Paul asked the commander, “Is it allowed for me to speak to you?” The commander responded, ‘You know Greek?’”

When the apostles wrote the Sacred Scriptures to various churches and peoples, the common written form was Greek, as most of the Jews of the Diaspora understood Greek, and lived in areas where Greek was spoken. It was common for the writers of the New Testament, when need arose to quote the Old Testament, to quote the Greek Scriptures rather than the Hebrew Scriptures.

With the incorporation of the Greek Old Testament Scriptures into the Greek New Testament via quotes, surely this puts the Greek Old Testament in a unique position, as these Greek Old Testament words have become engrafted into the Divine Word of the New Testament. For hundreds of years after the Christ, during the formation of the apostolic age, the Greek Scriptures were consistently read and quoted by the Church Fathers. These all-Greek Scriptures are still in use in Eastern Christendom today, although the Canon is different. The Apostolic Bible continues this tradition of The Apostolic Age Greek Scriptures, and is thus named The Apostolic Bible.

With the fact of the Greek Old Testament partly being grafted into the “inspired” Greek New Testament, it is inconceivable to think one can truly understand the deep meanings of the Greek New Testament without having the knowledge of the Greek Old Testament. For example, consider the following passage in the King James Bible, ”he hath made him to be sin for us...” 2 Corinthians 5:21. The word for “sin” is #266 “αμαρτία,” where in Numbers 6:14, and many other places in the Greek Old Testament, the word, “αμαρτία” is translated ”sin offering.” “Offering” noted by the Italics, is implied by the context, as it was talking of animals for a sacrifice for sin. Jesus becoming the “sin offering” opens a whole new aspect of understanding this verse. That the Greek Scriptures were designed for the Church is a strong argument, but this is not meant to demean the Hebrew Scriptures of the autographs. Seeing that God saw fit to communicate mainly through the written Word, it is to one’s advantage to search diligently both the Hebrew and Greek Scriptures.

CANON

The books of The Apostolic Bible correspond to the Hebrew Canon and the current Authorized Version, as
far as book order and names. The most notable difference in book names are 1, 2 Samuel, and 1, 2 Kings, which in the Orthodox canon are named 1, 2, 3, 4 Kings. The Orthodox Canon, along with the Roman Canon also contains books which do not appear in the Hebrew Canon, nor the current Authorized Version of the English Bible, such as the books of Baruch and Maccabees, commonly called the “Apocrypha.” The Apostolic Bible follows the book order of the current Authorized Version of the English Bible. It must be noted that many other book arrangements have appeared in various Bible manuscripts and printed editions over the centuries. For example, Tyndale's New Testament follows a different book order than the Authorized Version, and has the Book of Hebrews following 3 John. The development of the Holy Scriptures of the early church readily adhered to the all-Greek Scriptures of both Old and New Testaments, rather than a Hebrew Old Testament-Greek New Testament structure which is prevalent today in the English Bible. This all-Greek mode was the norm in Western Churches for hundreds of years during the development of the Latin, Syriac and Coptic Scriptures. The Greek Fathers, Clement, Eusebius, and many others, all writing in Greek, quoted the Greek Old and New Testaments extensively.

**APOSTOLIC BIBLE GREEK TEXT**

The Apostolic Bible was not begun with the thought of a new Bible translation, but was the result of years of private studies that evolved into The Apostolic Bible. The original typed text followed the Vaticanus-Sixtine text family. Then with the acquisition of the 1519 Aldine Bible in microfilm format from the Koninklijke Bibliotheek of the Netherlands, a comparison was made between the Sixtine and Aldine texts, where one reading was chosen over the other. With the acquisition of the 1709 edition of the Greek Old Testament, edited by Lambert Bos, the 1518 Complutensian Polyglot variants, located in the extensive footnote sections, were added for comparison with the Sixtine and Aldine texts. With further comparison it was decided to choose mainly the text where two printed editions agreed. But since that time the acquisition of a full set of the Complutensian Polyglot Bible in facsimile format enabled a closer comparison to be made, not only of variant readings, but also chapter and verse variations, along with punctuation. As various manuscripts become available, these will also be compared with the text of The Apostolic Bible, and changes may be made.

The Vatopedi manuscript, available from the Library of Congress in microfilm form, is one such manuscript among many that will be used for comparison.

**APOSTOLIC BIBLE STRUCTURE**

The history of interlinear Bibles goes back into the manuscript age where interlinear Bibles appear with various language combinations. For example, the ninth century Codex Boerrianus displays the Greek text of the Pauline Epistles with the Latin appearing above every Greek word. The earliest printed Greek Bible, the Complutensian Polyglot, has an interlinear Greek-Latin text for the Old Testament, with the Hebrew Scriptures being in a separate column. Given the introduction of the numbering system of James Strong, interlinear Bibles took on a three line format with the Strong's number appearing above the Greek and Hebrew texts, and the English below.

The Apostolic Bible is the first numerically coded Greek Old Testament, and it allows the student of the Word to study both Testaments in the same language, and to follow the association of a word from either the New Testament to the Old Testament, or vice versa. The Apostolic Bible trilinear format has the AB-Strong numbers on the top line, the Greek text on the middle line, and the English translation on the bottom line. The Apostolic Bible text is separated into books, chapters, section headings, verses, and footnotes.

**AB-STRONG NUMBERING SYSTEM**

In 1890, James Strong developed his monumental work, *The Exhaustive Concordance of the Bible*, containing every English word of the Authorized Version, commonly called the King James Version. Included in this monumental work are two companion dictionaries of the Hebrew and Greek Scriptures. The first dictionary
is, *A Concise Dictionary of the Words in the Hebrew Bible*, numerically coded, containing 8674 Hebrew words with English definitions corresponding to the Exhaustive Concordance. The second dictionary is, *A Concise Dictionary of the Words in the Greek Testament*, numerically coded, containing 5624 Greek words with English definitions corresponding to the Exhaustive Concordance. As the English Authorized Version is based on the Hebrew Old Testament and Greek New Testament, a problem arose when it was decided to numerically code the Greek Old Testament, which had not been coded by James Strong. It was decided to adapt the Strong's New Testament Greek Dictionary numbering system to The Apostolic Bible, and to furnish numbers for the Greek Old Testament words that were not included in Strong's Greek Dictionary of the New Testament, by alphabetically inserting new numbers delineated by decimal points between the existing Strong's New Testament Greek words. Hence, a word with an AB-Strong number with a decimal point generally means that that word appears only in the Greek Old Testament. In some cases various Strong's numbers have been merged into one number, mainly concerning the verb “εἰμί,” or “to be” where James Strong had subdivided the word “εἰμί” by tense and mood and had given each conjugation its own number. But now these words have been combined into one basic number - #1510. Likewise the personal pronoun “εγώ,” or “I” was subdivided by case and number, and each declension was given its own AB-Strong number. These words are now combined into number - #1473. Whenever a merger of Strong's numbers does occur, it will be noted in the Lexical Concordance under the old number.

SECTION HEADINGS, CHAPTERS AND VERSES

Section headings appear in The Apostolic Bible to enable one to quickly find a particular section of the Bible. Chapter and verse numbering in The Apostolic Bible generally follows the current Authorized Version model. The Complutensian Polyglot Bible agrees with the Hebrew as far as book and chapter order much more closely than the Sixtine or Aldine Greek editions. The Apostolic Bible follows the Complutensian Polyglot model which varies somewhat from the traditional printed Greek texts (mainly developed with the Sixtine edition).

FOOTNOTES

The footnotes in The Apostolic Bible are for reference purposes only, and not commentaries. Daggers in the text denote footnote usage, and have complementary dagger marks in the footnotes for the marked verse. The abbreviations used in the footnotes are explained in the abbreviations list below. The most common footnote, "see Bos for variants," refers to the Vetus Testamentum LXX, published in Holland in 1709, and edited by Lambert Bos. The main text of the Bos Bible is a reprint of the 1587 edition of the Vatican manuscript Codex B, or Sixtine Edition. The reference "Six." refers exclusively to the text of the Bos Bible rather than its footnotes. The reference "CP" refers to the Complutensian Polyglot Bible printed in Alcala, Spain in 1517, but with most of its variants listed in the Bos footnotes. The reference "Ald." refers to the Aldine Bible printed in Venice, Italy in 1518, by Aldus Manutius, containing the Old and New Testaments in Greek only, but with most of its variants also listed in the Bos footnotes. *See Note on the Second Edition.

ABBREVIATIONS

Advb. - Adverb
Ald. - Aldine Edition
Alex. - Codex Alexandrinus
Aram. - Aramaic
Chald. - Chaldean
CP - Complutensian Polyglot Bible
dim. - diminutive
et seq. – and the following
Heb. - Hebrew
i.e. - that is
lit. – literal; literally
Six. - Sixtine
substv. - substantive
translt. - transliteration
viz – namely
ACCENT MARKS AND PRONUNCIATION

The earliest Greek Bible manuscripts were written in the uncial form; that is, capital letters, and they had few or no accent marks. Without going into great detail on the development of accent marks, let it be noted that volume 5 of the Complutensian Polyglot Bible, printed in 1518, contains a New Testament text that is accented with only one accent mark; that is, the acute, over the vowel being emphasized. The 1843 2-volume set of William Pickering's Greek New Testament contains largely an unaccented edition of the Greek New Testament. The Apostolic Bible has a single dot above the vowel, or vowels which take the emphasis. With some unaccented Greek words, called enclitics, the preceding Greek word can take accents over more than one vowel.

BRACKET STRUCTURES

Common English word order has the subject listed before the verb; for example, "the sufferings of the Christ abound." Greek word order may differ by having the verb appear before the subject; for example, "abound the sufferings of the Christ." For clarity the bracket structure is used with a follow-the-number scheme.

\[
\begin{align*}
4052 & \quad 3588 & \quad 3804 & \quad 3588 & \quad 5547 \\
\text{περιπάτεων} & \quad \text{τα} & \quad \text{παθήματα} & \quad \text{του} & \quad \text{Χριστοῦ} \\
\text{["abound 1the 2sufferings 3of the 4Christ]}
\end{align*}
\]

HYPHEN STRUCTURES

Hyphen structures appear throughout The Apostolic Bible, and are similar to bracket structures, except generally only two or three words at the most are at issue. Hyphen structures are used, among other things, with Greek pronouns where the Greek word order is reversed. For example, in Genesis 3:14 the hyphen structure,

\[
\begin{align*}
3739 & \quad 5037 & \quad 3588 \\
\text{o} & \quad \text{τε} \\
\text{both}
\end{align*}
\]

literally would read "breast of you," but is translated, "your breast." In this case the English words are not directly under their Greek words. Another example is in Genesis 1:11 with the hyphen structure,

\[
\begin{align*}
2036 & \quad 3588 & \quad 2316 \\
\text{εἶπεν} & \quad \text{o} & \quad \text{θεὸς} \\
\text{God said}
\end{align*}
\]

which would literally be, “said the God,” but is translated, “God said.” Hyphen structures are also found with most far & wide words listed on page vii. In Genesis 2:10 the hyphen structure,

\[
\begin{align*}
4215 & \quad 1161 \\
\text{ποταμὸς} & \quad \text{δὲ} \\
\text{And a river}
\end{align*}
\]

would literally read, “river and," but is translated, "And a river." A final example of a type of hyphen structure appears in Acts 1:13,

\[
\begin{align*}
3739 & \quad 5037 \\
\text{ο} & \quad \text{τε} \\
\text{both}
\end{align*}
\]

where two numbers and two Greek words appear, but only one English word, "both." Sometimes a group of particles take on a combined meaning that would not be obvious with individual words. Hyphen structures may occur within Bracket Structures. Hyphens between AB-Strong numbers should send a signal that the word order has been changed, and the English word does not necessarily lie under its Greek equivalent.

PUNCTUATION & ITALICS

Following the tradition of the earliest manuscripts, there are no punctuation marks in the Greek text of The Apostolic Bible. Many of the earliest Greek manuscripts did not even have letter spacing, and all the letters ran together and would have looked something like this: andenoslivedahundredandnin- tyyears. Punctuation marks were added to the Greek text through the centuries, and many manuscripts differ in these punctuation marks. Punctuation marks appear in the English text of The Apostolic Bible, but not the Greek text. Question marks are added when
the text clearly shows a question is asked, but this is not always evident, as the Greek does not always have a "why, does, do, will, or can." Commas are used when slight pauses in the text flow are present. Semi-colons, and dashes are used for breaks, depending on the intensity of the break. The period marks the end of a sentence. The Apostolic Bible takes advantage of the Greek imperative by placing an exclamation mark as close to the imperative as possible. In a few places parenthesis are used to set off words not intended to be part of the main argument of the text. The apostrophe is used as in general English usage. Brackets are used in bracket structures for aid in following the Greek word order. Daggers in the text refer to footnotes. Quotation marks do not appear in The Apostolic Bible, as they take on too much of an editorial presupposition as to who is saying what. English words appearing in the italic font are words that have been added for clarification by the translator, or words that do not agree with the Greek grammatical structure demanded.

**COLLECTIVE NOUNS**

In English, the phrase, "the people" means a group of people. In Greek the noun can take either a singular or plural meaning, and is often preceded by the definite article which can be either singular or plural, and agrees with the noun it modifies in number. In this case the singular Greek article would necessitate a singular "people." Conversely a plural article would necessitate a plural, "peoples." Many other like structures exist in the Greek Scriptures, and although the English word appearing in the plural with the ending "-es" may appear strange, the Greek insists on it, if one is doing a literal translation. Therefore many English collective nouns will end with "-es." Literalness takes precedence over smooth reading and is of foremost importance in translating the Scriptures.

**PROPER NAMES**

The spelling of proper names, including titles and places in the Bible, is an inexact science. It would seem that if a proper name would be just transliterated into the vernacular there would be no confusion, but such is not the case. Hebrew names translated into Greek have taken on their own identity, and therefore names have been spelled and pronounced differently from the original, as they are not all transliterations of the Hebrew, or English transliterations from the Greek. For example, the Hebrew name Yeshua has been transliterated into Ἰησοῦς, pronounced "ee-ee-sous" in Greek, but from Greek to English Ἰησοῦς has been translated Joshua, Yeshua, and Jesus. Another example of name confusion is the name of Elijah the prophet, called Elias in the King James New Testament, but Elijah in other English bibles. In general the Apostolic Bible has kept to current spellings of well-known names in the Bible.

The proper name for the Deity is another area and one of great concern. **THE NAME** as spelled in the Hebrew alphabet is "יהוה". But "יהוה" is seldom used in English Bibles, opting for the usage of "the LORD." What name the original translators of the Hebrew Scriptures wrote with pen for THE NAME in the Greek Scriptures is unknown, but the majority of the extant manuscripts have "κυρίος" which is translated, "the LORD," with "the" added for clarity. But the word "κυρίος" is also used for a lord of a manor, a magistrate, or a ruler, translated "master" or "lord," with the lord in all lower case. Also, it is not uncommon to find "κυρίος, κυρίος" in the Greek, meaning "the Lord κυρίος." There are Greek manuscripts where the tetragrammaton "תָּהוֹם" appears in the Greek text with the original Hebrew letters, and this may have been the original method with some Greek autographs. Therefore in The Apostolic Bible all examples of lowercase "lord" refer to a person of esteem. "LORD" with all letters capitalized refers to the tetragrammaton "תָּהוֹם." "Lord" with the first letter capitalized in the Old Testament stands for the first word of "Lord κύριος." In the New Testament "Lord" with the first letter capitalized stands for the "the Lord" when referring to Jesus/Deity.

Proper names have been capitalized in The Apostolic Bible, but that leads to the question of what is a proper name? "Satan" in many places has been traditionally translated as both "adversary" and "Satan." "God," as a title for the Deity has been capitalized, but when the case refers to deities the lower case "god" is
used. This leads to problems in certain cases as to whether the Scripture is referring to God or a god. Another example is "Philistine," referring to a certain people dwelling in Philistia, while in other instances "philistine" is a reference to a condition of perceived barbarity used in a somewhat pejorative sense.

James Strong numbered the Hebrew Old Testament and Greek New Testament proper names. The Apostolic Bible does not number proper names at all, but instead puts an asterisk above every proper name and title.

PLANTS AND ANIMALS

The names given for the animal kingdom pose another problem. For example, names such as siren, dragon, and satyr...do these represent true animals or a personification of ancient thought to a type of daemon? Greek dictionaries are not in complete agreement when it comes to animal and plant names. The Greek tree called the "sycamine" is commonly translated into "mulberry," but in no way could it be related to the mulberry tree located in England. Consider the evergreens: the pine, fir, cypress, spruce; can we be sure which is being referred to among the trees of Lebanon? It may be best to do studies of each particular name within the context of profane writings to gather more facts and descriptions to identify certain species. However, that might not be completely satisfactory, for what is called a "rabbit" in one region may be called a "hare" or "hyrax" in another. Similarly, in the animal kingdom, the ox is a term for a member of the oxen family, and is also a general term for any member of the bovine family. Other problem areas include the locust and grasshopper families with numerous Greek names for many species.

ENGLISH-GREEK INDEX

The English-Greek Index of The Apostolic Bible is the second of the three major works of The Apostolic Bible. *See Note on the Second Edition. The English-Greek Index is an alphabetical listing of every English word appearing in The Apostolic Bible, except for proper names. The structures consist of the English index word appearing on the top line, and the Greek dictionary word, or "stemma," indented below with the AB-Strong number to the right of the stemma. Another indented section of English words may appear below the stemma, and these are parallel English words having the same stemma for their parent. These English parallel words appear under their own respective structures elsewhere in the English-Greek Index. The English word as it appears in the text of The Apostolic Bible may not be identical to the English index word. For example, "changeover" may be just "change," depending on the context. Or "lodge strangers" may be just "lodge," as there might be a separate Greek word for "stranger" following.

LEXICAL CONCORDANCE

The Lexical Concordance is the third of the three major works of The Apostolic Bible. *See Note on the Second Edition. The Lexical Concordance consists of columnar structures. The top line of the structure consists of the Greek dictionary word, or "stemma," in the present active indicative, first person singular form for a verb, and in the nominative singular form for a noun-adjective. On the same line to the right of the stemma is the AB-Strong number. Below the stemma is the concise English lexical entry. Transliterations are words that have been copied letter by letter from one language to another, but have no true meaning in the secondary language; that is, the word does not generally appear in any dictionary. For example, 1 Chronicles 12:21, a raiding band or troop is called in Hebrew, the "g’dood." Similarly the "g’dood" is translated γέδδουρ in Greek. Transliterations are marked in the lexical entry with italic words such as Hebrew, Syriac or whatever trace language is referred to. Transliterations appear in various ways. One example is how the Greek word is transliterated more or less letter by letter into English, such as “αγγελος” to "angel" rather than a descriptive English word being used, in this case, "messenger." Transliterations can cross the boundary of more than one language; for example, in Mark 5:41, "ταλιθα" is a transliteration from Aramaic into Greek, then again is transliterated into the English "talitha."
But in this case the meaning of “ταλιθα” is furnished by the following words in the verse explaining that “ταλιθα” means “young woman” with “κορασιον” being the explanatory Greek word. In the concise lexical entries, commas delineate similar words or synonyms, and semi-colons delineate words that take on different meanings. A bold case word in the lexical entry signifies that that word actually appears in The Apostolic Bible text, and in the English-Greek Index of The Apostolic Bible. The non-boldface words listed in the lexical entry are words which do not appear in The Apostolic Bible, but are listed for reference purposes only. Following the lexical entry is the book, chapter, verse(s) location in The Apostolic Bible of that particular Greek word, where the AB-Strong number will appear over a variation of that Greek word in the chapter and verse indicated. Within the chapter-verse structure there may be found an asterisk or a dash. The asterisk shows that two or more instances of that Greek word will be found in that particular verse. The dash shows that that particular Greek word appears in every verse between and including the two listed verses. The following fifty Greek words appear extensively throughout the Greek text of The Apostolic Bible, and they are termed “far & wide,” and do not have the books, chapters, and verses listed.

235  – ἀλλα  2596  – κατα
302  – αν  2962  – κυριος
473  – αντι, ανθ’  3303  – μεν
575  – απο, απ, αφ  3326  – μετα, μεθ, μετ
1063  – γαρ  3361  – μη
1065  – γε  3568  – νυν
1161  – δε  3588  – ο
1211  – δη  3739  – ος
1223  – δια  3754  – οτι
1437  – εαν  3756  – ου, ουκ ουχ
1438  – εστωσ  3761  – ουδε
1473  – εγω  3767  – ουν
1519  – ες  3778  – ουτος
1537  – εκ, εξ  3779  – ουτως
1563  – εκει  3844  – παρα, παρ
1565  – εκεινοι  3956  – πας
1722  – εν  4012  – περι

1909  – επι, επ, εψ  4253  – προ
2089  – επι  4314  – προς
2193  – εος  4862  – συν
2228  – η  5037  – τε
2316  – θεος  5100  – τις
2400  – ιδου  5228  – υπερ
2443  – ινα  5259  – υπο, υπ, υψ
2532  – και  5613  – ως

STATEMENT

English Bibles have taken on a divine aura of their own, with some holding the translation to be divinely inspired, as some claim concerning the King James Version. A multitude of man-hours went into the translating of these early Bibles, and then more man-hours were expended in the book production, where the final product was a book printed in the thousands, or millions in some cases. Making a change in one of these Bibles was not an easy task, and certain Bibles were nick-named after various errors in printing, such as the “Adulterers Bible,” where “not” was left out of “thou shall not commit adultery.” These Bibles became so well accepted, that any variation in later editions or other Bibles were suspect. As the reader in general didn’t have the original language to compare, he or she was at the mercy of the translator being true to the original, and not embellishing or bending the meaning to his purposes. A vernacular only Bible does not exhibit the original language, and as the translator can choose whatever English word suits his taste, it becomes very difficult to confute his or her choice of words, as the original is not present. With an interlinear Bible such is not the case. The translator is held to a higher standard, as he must use English words which reflect the exact meaning of the original Greek word, and any other English word would be suspect and easily refuted. Two translators with the same motives still could come up with different readings, as each translator has the awesome privilege of choosing which vernacular word to use for the God-breathed word of the original. Anyone learning the original language has the privilege to choose his or her own word, but one must be careful and not choose a word that the context
would disagree with, although it may appear correct in English. If one said a certain beast was an "animal," but the word in Greek meant "horse," then the translator would be guilty of fraud, although the translation in English would appear correct because a horse is an animal. As the God-breathed words of the autographs were in Hebrew and Greek, it must be noted that a translation must not replace the original, for far too much emphasis has been relegated to vernacular only Bibles, rather than emphasizing the studies of the original languages.

*ANALYTICAL LEXICON

With the inclusion of The Analytical Lexicon of The Apostolic Bible into The Apostolic Bible Polyglot there are now four major works. The Analytical Lexicon is NOT included in the printed edition, but is available for download on our site apostolicbible.com, on a CD-ROM, and in print on our online Bookstore. The Analytical Lexicon of The Apostolic Bible lists the parsing of every Greek word in The Apostolic Bible, other than proper names. Rather than in the traditional alphabetical format found in most analytical lexicons, the Analytical Lexicon of The Apostolic Bible lists the words first by their AB-Strong number and then alphabetically. With this format it is not necessary to go through numerous pages to look for a word, especially difficult if one is not familiar with Greek. In this lexicon all one needs to do is to find the AB-Strong number and then look for the Greek spelling of the word in that section. The Analytical Lexicon is divided by AB-Strong number sections. Proper names are not included. The first line of a section displays the part of speech of that Greek word, such as noun, adverb, etc., with the AB-Strong number to the right. The second line is the “lemma” line which lists the Greek word that would be used to find information in dictionaries, concordances or indexes, especially the Lexical Concordance and the English-Greek Index of The Apostolic Bible. Below the lemma line is the listing(s) of every particular spelling of every Greek word which appears in the Old & New Testament text of The Apostolic Bible with that particular number appearing above the Greek word. To the right of the Greek word is the parsing information for that particular word. Every Greek word found in The Apostolic Bible Old & New Testament text is listed in The Analytical Lexicon under its particular lemma/AB-Strong’s number, but not every possible parsing is given for every Greek word; but the correct parsing for the Greek word which appears in the Old & New Testament text of The Apostolic Bible will appear in the Analytical Lexicon.
FOOTNOTES

Three additional works are now mentioned in the footnotes. The first work is by Strabo 64 BC - 24 AD, entitled Geography, and is available at Harvard University Press. This eight book set from the Loeb Classical Library displays the Greek on the left page and the English translation on the right page. Comparing the Greek place names in The Apostolic Bible Polyglot to Strabo’s works is well worth the effort and offers an insight to the living conditions of many places mentioned in the Bible to a contemporary of the Biblical writers. Eusebius 260 - 340 AD was the author of Ecclesiastical History, which work is also available in the Loeb Classical Library, and offers many direct quotations of Greek Bible verses. A Concordance of Eusebius’ Ecclesiastical History of Biblical quotations is offered in PDF format on our web site apostolicbible.com under Items of Interest. H.W.F. Gesenius’s, Hebrew-Chaldee Lexicon to the Old Testament is numerically coded to James Strong’s Exhaustive Concordance. The footnote apparatus of The Apostolic Bible Polyglot now lists the Strong’s number of the Hebrew transliterations, and thus the Hebrew lexical information may easily be found in the numerically coded Baker Book House edition of 1984. Lastly there is now a cross-referencing apparatus with quotations by New Testament authors of Old Testament scriptures with book, chapter, and verse listed in both testaments. An easy comparison can now be made between words of the Old Testament quoted by the New Testament authors, and when going through the Old Testament one can see that a passage was quoted by New Testament authors.

STATEMENT

The Apostolic Bible Polyglot English translation must not be considered as set in stone. As mentioned earlier different translators can choose different words for the Greek. The English words chosen by this translator are prayerfully considered and offered to the reader. The translation was done by one person, rather than a group of individuals. In the opinion of this translator a continuity of the English words is attained when one individual is doing the translating of the whole, as compared to a group of individuals in which each may be translating only one book of the Bible. It may be impressive to see the names of many scholars listed in a translation, but this may not make the work more scholarly.
